React. Reaction. In fishing it is everything. In most cases you need to be quick to react to hook the fish of a lifetime. In others, you need to be slow and deliberate in order to hook the fish of a lifetime. This series, born from these age old truths make up one of Seeker's greatest secrets. Most fishermen don't realize that our production diversity ranges from ultralight freshwater rods all the way up to IGFA tournament Unlimited class rods. On the freshwater end of the spectrum, Seeker developed a very unique line of composite as well as 100% lightweight S-Glass freshwater bass rods which also found their way onto the ocean for our bay and inshore fishermen.

Our S-Glass React Series (SR) rod is designed for the crankbait fisherman who understands the need for the rod to have a soft tip, stiffer in the mid section, and finally shut off to pull those big bass toward the boat! We've got some of the country's top pros fishing with our S-Glass rods with a variety of baits.

Our composite rods (CR) are fantastic for other reaction baits as well. They accommodate the needs of the spinnerbait, jerk bait, and twitch bait fisherman. They have great actions giving the angler the ability to cast the baits a country mile while having enough backbone to set the hook on those long casts. The most important part of our React CR line is that because it is a composite construction, it is significantly more durable than the average 100% graphite rod. They are able to withstand significant loading such as lifting fish into the boat, pulling big fish through thick cover, and definitely power fishing with today's super braided line.

Chose React for fresh & saltwater reaction bait domination!
