

- NIRLVL & NIRLVH Guides
- 100% Titanium Frame
- Ring Lock Design
- Nanolite Ring Material
- Quad-Leg Design
- Hyper-Light Weight

The Hercules Series is the result of combining over 60 years of rod building and designing knowledge (Randy Penny & Billy Vivona Collaborative Effort) with state of the art military spec fiberglass and carbon graphite materials. The Hercules Series of rods is by far the most durable and strongest series ever released by Seeker Fishing Rods.

Originally designed for offshore deep water vertical jigging, the Hercules series has become legendary for hooking, dominating, and landing record size fish of all types. All of this power is wrapped up neatly in an ultra light weight package utilizing a small diameter blank design, high density EVA foam grips, graphite reel seats (aluminum on production spinning rods), aluminum gimbals, and American Tackle Virtus Hyper Light 100% Titanium Guides on both our conventional and Spinning rods. It would be difficult to find a tougher, lightweight rod that would outperform the Hercules.

For the west coast, the Hercules rods have come on strong providing anglers with options to the traditional fast taper offshore rods that put greater pressure on the back. These lightweight power rods are well suited to smaller framed and senior anglers looking for the right rod to fight today's long range quarry. In 2010, Randy Penny went back to the design board and came up with 8' and 9' models perfect for tossing the latest in surface irons, new acrylic baits, and plastics.
