

Merrick Tackle carries the complete line of Century blanks

The most advanced line of blanks in the world... CENTURY. What sets them apart from other blanks is the special blend of epoxy resin, the finest grade of carbon fiber, and their AUTO-CLAVE process. During the curing stage of the blank, the autoclave process is able to keep total control of pressure and temperature. That leaves a void free composite with only enough resin to hold the carbon together. That in turn makes the blank less brittle, have a better recovery, longer life, and provides the longest possible cast!

Century - technology and craftsmanship ... seeking the boundaries of performance.

Our blanks are manufactured in a state of the art factory based in the United Kingdom - equipped with the most up to date technology and machinery.

We are in our fourth decade of investment in research and design purely focused on making the finest tackle.

Century blanks are used by World's longest casters to seek out far horizons and by specialists who patrol the waterside with finesse and sensitivity.
