AFFINITY SERIES SINGLE HANDED FLY BLANKS

The Affinity series blanks represent the forefront of blank design utilizing all the features of the CTS blank technology program. The Affinity Series boasts CTS's "Vero Core", variable weight helical core. Born from the desire to create lighter more efficiently engineered blanks, this new helical technology starts with a super lightweight helical reinforcement at the tip and progresses to a more powerful helical that delivers the cross sectional stiffness renowned in the Affinity heritage. New for 2010 is the introduction of our super low resin systems. Utilizing materials with resin contents up to 30% less than standard materials, CTS's latest blank lineup are lighter, stronger and narrower. Increasing bending limits, response and improved casting. Thanks to our constant taper system, the Affinity Series load beautifully to deliver the punch needed for distance and accuracy

AFFINITY MX

High Performance Freshwater Fly

An extremely smooth and forgiving fast action that is easy to load and delivers predictably, in short the MX provides the angler with a quicker recovery and more punch in the short to medium range

Taper: Moderate Fast

Action: Fast

Material: 57msi Carbon

Core: VeroCore Carbon Helix

Options Available: 2,3,5,6pc.

AFFINITY X

High Performance Fast Action Fly

Short to medium casting strokes delivering improved control and accuracy. The latest generation of our Affinity X series has a lower diameter to improve strength and agility. A delicate tip area loads the blank smoothly and quickly into the solid upper mid area making it perfect for delicate situations. Matched with a strong butt area this blank delivers plenty of power down low when needed

REVO SALT

High performance Saltwater Fly

The new benchmark for heavy saltwater fly. This model has been designed specifically to bridge the gap between spinning and fly. We have take the lifting/fish fighting power of spin and combined this with the cast ability and presentation level of a fly blank. The Revo series has a moderate progressive upper half with the ability to load easily and smoothly. It has the lower mid power to deliver exceptional distance and low down power to really fight fish when the angler demands it.

AFFINITY DOUBLE HANDED FLY BLANKS

Over the past years many double handed anglers worldwide have added feedback towards the development of the present CTS Affinity two handed rods. This has resulted in a superb series of highly efficient casting and fishing tools. The Affinity series has become not only accepted, but has become well respected within the entire community of double handed anglers fishing their favorite rivers worldwide. The Affinity series of blanks represents the forefront of blank design utilizing all the features of the CTS blank technology program. Boasting CTS's 'VeroCore' variable weight helical core. Born from the desire to create lighter, more efficiently engineered blank the new helical technology starts with a super light weight helical reinforcement at the tip and progresses to a more powerful helical that delivers the cross sectional stiffness renowned in the Affinity heritage

AFFINITY PLUS DH

The newly released DQ taper increases tip power and loading into the butt. While the super low resins content carbons increase response and reduce weight, the classic progressive tape, flex and speed of recovery will allow efficient delivery of all contemporary two handed line systems. Skagit shooting heads and classic underhand power delivery technique will inherently require tip loading. The Affinity Plus DH tapers with a very economic stroke, utilizing only minimal applied dominant underhand power. Minimal anchor "touch and go" delivers typical of classic Scandi shooting head line systems will require utilizing only the top 2/3 of the affinity Plus DH tapers for maximum performance. The affinity plus DH tapers have the butt reserve to transfer power well into the cork when asked.

AFFINITY SK DH

The Affinity SK DH blanks are ideal tools for managing the sustained anchor of Skagit shooting heads with extreme sink tips in tow, they also manage all short to long belly floating classic Spey tapers with ease and will do especially well with the challenging line management of full sink classic Spey tapers. When compared to the Affinity Plus DH blanks the SK will have slightly less flex (stiffer) in the top 2/3 and have more flex (softer) in the bottom 1/3. This is done to easier manage anchor release of Skagit shooting heads with heavily grained tips with heavy flies in tow as well the release of full sink classic Spey lines. With Skagit shooting heads the Affinity SK DH tapers come to the front to manage the sustained anchor of extreme sink tips and heavily weighted flies with an absolute minimal amount of expended energy on the part of the caster. Line management of these lines is best done with a very economic short stroke and underhand dominant.

VAPORTRAIL

Long Distance, Lightweight

This series features the slower rod action that many Northeast anglers prefer but does it with an incredible blend of lightweight high modulus carbons in an extremely thin profile blank. These rods load evenly in that familiar smooth and forgiving arc while having a flexible tip that provides the ability to work Poppers, Swimmers and bucktails well. The extremely thin taper cuts effortlessly through the wind often encountered casting from the beaches and rock piles of the Striper Coast. The high modulus carbon blend with no woven fiber adds casting performance never before experienced in slower action rods. These rods surpass the performance of the legendary GSB series while being lighter in the hand. Given their very thin diameter these blanks have an amazing amount of reserve power. These rods do not collapse under a powerful cast and their pulling power can turn the most powerful fish in the strongest undertow. These rods are rated precisely and perform very well even at the extremes of their ratings and surprisingly cast below their ratings with authority.

S8 SURF

High Performance Surf

The S8 Surf series is the lightest, most powerful long range casting blanks in the world today. These blanks feature a zoned action; the butt is stiff and tapers into a moderate midsection and then a fast action tip. This design transfers all the power you put into the cast efficiently to your payload. The Surf series excels at casting plugs and poppers at large predatory fish and has become a favorite of many who chase Roosters and Jacks on Mexican beaches. Metals are put in orbit and schools on the far side of the bar are no longer safe. The S8 works well built as spinners or conventional and the heavier rated rods perform extremely well as weight and bait heavers targeting stripers, drum and sharks.

SURF & JETTY

PJ SERIES

The PJ series was designed with the northeast fisherman in mind. Constructed from 44msi carbon these blanks are extremely light for what they are capable of handling, whether you are throwing a lure or working a bucktail on your favorite rock the PJ series of blanks are the perfect choice. Now available are five one piece models for the angler that demands a state of the art one piece blank in 9' & 10' models.

ELITE SERIES

The Elite series of blanks are at the forefront in design technology, Boasting CTS's 57msi MRT Technology. Born from the desire to create lighter more efficiently engineered blanks, this new layup process allows us to entirely change the material used in different areas of a 1pc. blank. Also incorporated is our VeroCore, Variable weight helical core. This helical technology starts with a super light weight helical reinforcement at the tip and progresses to a more powerful helical that delivers the cross sectional stiffness that enhances blank response and feedback. The unique triple taper system in the Elite series starts at the mandrel design and is then finished off at our layup process where no fewer than three different grades of carbon complete the blank. This taper system provides sensitive tips, beautiful transmitting mid areas and super powerful butt. New for 2010 is the introduction of our super low resin systems. Utilizing materials with resin contents up to 30% less than standard materials, CTS's latest blank lineup are lighter, stronger and narrower. Increasing bending limits, response and improved casting. Simply put, the Elite series is packed full of technology to provide blanks unmatched for power, weight and precision.

ELITE MAG

The Elite Mag series combines the finesse of a sensitive smooth action tip with superb butt power to cover most light line fishing demands. This series is unsurpassed and has a perfect balance between weight, power and sensitivity.
