***NOTE: AFTCO CARDED SETS ARE A SPECIAL ORDER**

STANDARD SWIVEL TOP

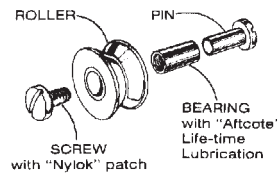

These are the ultimate tip-tops for lighter wire line fishing. The finely detailed bail with its Fuji SIC ring keeps lighter wire running on the center of the stainless roller and keeps wire from touching the frame. The #3 roller is oversized to minimize stress on the light wire, and all of the small swivel tops are fitted with Aftcote® bearings. The small swivel tops are available in both chrome and black finish. S=CHROME, B=BLACK

THE Name To Look For

When Choosing A Quality Rod.

If it's quality you want in a saltwater fishing rod, look no further than the AFTCO name. At AFTCO, we specialize in building the finest saltwater fishing components — roller guides, rod butts, reel seats and gimbals — precision built hardware that you'll find on only the highest quality fishing rods. The AFTCO name is your assurance that the rod builder refused to compromise on quality, suggesting that such hidden features as the strength and performance of the rod blank, the tightness of the wraps and the durability of the adhesives and finishes and also of the highest integrity. AFTCO — the name to look for when choosing a quality fishing rod.

STANDARD ROLLER TIP-TOPS

For rods using 2-lb. to 30-lb. test lines.

No Screws, No Pin Design! Exceptional strength with minimum weight. Easy to lubricate and maintain without disassembly. Quickly pry the guard from the frame with a small screwdriver. For reassembly, just squeeze the guards together and snap them back into place.

LIGHTWEIGHT ROLLER GUIDES

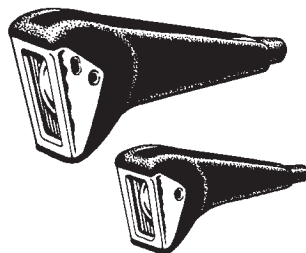

Versatile AFTCO lightweights bring new standards of guide performance to a wide range of fresh and saltwater rods using 2–20lb test lines.

LIGHTWEIGHT ROLLER TIP TOPS

Affix to blank with a good epoxy or “hot melt” top glue, providing your glue’s melting point does not exceed 33 degrees. A small propane or gas torch may be used to heat the tube before fitting into the blank. Be careful – overheating can melt the tube, it takes a little practice.

4 per set

Tip Top

- These roller guides are radially mounted on the rod in a spiral manner around the axis of the rod from the stripper guide to the tip.
- Spiral configuration enables the rod to perform under heavy loads without radial twisting of the rod and with minimum reel twisting as it is being wound.
- All stainless steel frames and all stainless steel components.
- Components are interchangeable between all frames and tips (spiral NS rollers & tips and conventional AA rollers & tips)
- Fresh water rinsing holes eliminate salt binding of rollers.
- Extremely large knot clearance passes the largest wind-on leaders.
- Will handle line test of more than 200 lbs.
- Standard color Silver frames are an electro polishing process that brightens stainless steel. Chromium and nickel, which are components of stainless steel, are electrolytically drawn to the surface. The effect is very similar to chrome plating, except there is no adhesion to be concerned with. The layer is a homogenous constituent of the metal and cannot delaminate or peel. This nickel chromium mono-oxide layer is extremely corrosion resistant.
- Same lifetime guarantee on the Neptune Spiral rollers and bearings as offered with the All American rollers and bearings.

HOW TO REMOVE OLD GUIDES, WRAPPED: Cut thread with razor blade. Do NOT cut blank. Clean blank with steel wool and wipe with a cloth. **HOW TO INSTALL GUIDES:** See that guides' feet rest properly on blank. Tape front foot on blank aligned with other guides. Thread wrap rear foot, remove tape and thread wrap front foot. Apply color preserver and rod finish per manufacturer instructions.

GUIDES & TOPS

Pacific Bay International is dedicated to offer the most complete line of quality guides and tops in the world. The quest for new designs, materials and finishes is driven by an industry that demands beauty and performance. Our research and development team continues to innovate new and existing guide styles. Diligent attention to detail necessitates utilizing only the finest materials and production methods from around the globe.

Guide & Top Frames

Pacific Bay continues to offer guide frames in a variety of coatings and platings designed for the rugged demands of sport fishing.

Our one piece stamped Fresh and Saltwater frames start with Bright Stainless Steel. This material combines nickel and chrome for a rust free surface.

We hard chrome plate the guide surfaces to increase wear resistance giving your rod years of service. Our chromed stainless steel surfaces are available in Black Chrome and a selection of standard and Light Titanium coatings.

Titanium Nitride (TiN) PVD has excellent reflective properties and provides a warm metallic gold color.

Titanium Carbide (TiCH) PVD is an extremely hard ceramic coating and provides superior wear resistance. The Illusion PVD coating brings a spectrum of colors for the custom rod builder

These formulations of hardness, flexibility and adhesion provides superb corrosion and abrasion resistance.

Our Saltwater Series series includes roller guide frames machined from solid marine grade aluminum and a foul-proof guide set made of SS304 with either a hard chrome plating or our popular TiCH coating,

TiN, TiBLue, TiCH, & Illusion
Pacific Bay has combined the TiGOLD™ (also referred as TiN - Titanium Nitride), TiBLUE™, Illusion™, and TiCH coatings with a diamond polished Zirconia ceramic ring.

The Zirconia ring has similar qualities to our popular Silicon Carbide ring.

Zirconia offers the ideal surface for applying an incredibly smooth PVD (Physical Vapor Deposit) finish to create one of the most durable and cosmetically appealing guides and tip tops ever offered to the fishing rod manufacturing industry.

Our PVD coating process provides a super hard, low friction surface that actually becomes a part of the ring material making it a perfect choice for today's braided lines.

Silicon Carbide (SiC)

Our SiC rings are at the top of our line. They are diamond polished to the smoothest possible surface among the "ceramic" materials. Silicon Carbide provides the ultimate in abrasion, corrosion, and thermal shock resistance, a performance plus on any rod where line speed, friction, and heat build-up are at the maximum. Now, with the exception of the models "B" and "RB", our current SiC guides and tops will feature newly redesigned rings that are thinner and lighter in weight, creating the perfect balance of performance and cosmetic appeal.

Hialoy™ (Hard Aluminum Oxide)

Hialoy represents the hardest grade of Aluminum Oxide available. Strength and durability allows mounting without a shock ring for lighter weight and better heat dissipation. Hialoy has become the most popular choice of many major rod manufacturers. This high grade ceramic ring is diamond polished to reduce friction and line wear, Hialoy rings will provide many years of service in all salt and freshwater applications making them an ideal choice for any rod.

Titanium Oxide Rings

Titanium Oxide rings are diamond polished to a smoother surface and are harder than many other manufacturer's Aluminum Oxide rings. Strength and durability allows mounting without a shock ring. Our TiOX™ Blue rings possess the same PVD coating process that is applied to the TiBLUE™, TiCH, and TiGOLD™ rings, giving the rings an even more durable and attractive appearance. The traditional titanium oxide rings have been an industry standard of rod manufacturers for many years and are a Pacific Bay exclusive.

Aluminum Oxide Rings

Diamond polished to a rich black surface, this Aluminum Oxide is our most economically priced material and one of the first ceramic rings to widely popularize insert guides. Strength and durability allows mounting without a shock ring. They have been utilized by rod builders for decades and are still available today.

GUIDES & TOPS

ONE PIECE STAMPED FRAME GUIDES - MODEL SV

- For light to medium action spinning and casting rods.
- Single foot design for flexibility, lighter weight, and increased sensitivity.
- Available with SiC, Hialoy, Aluminum Oxide, Illusion, TiOX™ Blue, TiBLUE™, TiCH and TiN coated rings.
- SiC models feature thinner profile rings.
- Frames available in bright stainless, black chrome, TiGOLD™, gold plated, and our TiCH coatings.
- Use with model L or model P Tops

GUIDES & TOPS

STAMPED FRAME GUIDES - MODEL S

- For use on medium to heavy casting or spinning rods, and for fly rod strippers.
- Stamped stainless steel braced frame for added strength. Higher frame design reduces line slaps.
- Available with Hialoy or Titanium Oxide rings, and bright stainless, black chrome or gold plated frames.
- Bright and black frame Hialoy available through size #70.
- Size #70 brace has been eliminated for lighter weight, and to improve flexibility.

Pac Bay Twister Series

TWISTER GUIDES

Tough - Reliable - Foul Proof

SS304 Stainless Steel foul proof guides are virtually indestructible and provide the strength you need when you need it the most. Pac Bay offers these reliable saltwater guides in stainless steel and TiCH. These guides are extremely tough, resilient, and without a ceramic ring provide a noticeable reduction in overall rod weight. All Twister Guides are available in Hard Chrome and TiCH in the following sizes: 6, 7, 9, 11, 13, 15, 18, 20.

ONE PIECE STAMPED FRAME GUIDES - MODEL M

- For ultra light and light action spinning rods.
- Higher frame reduces line contact with blank, while smaller ring helps to strip line from reel more efficiently for increased casting distance.
- Lighter weight for increased sensitivity.
- One-piece stamped stainless steel frame available in black chrome, 620 gold plated or TiCH.
- Available with Hialoy ring.
- Silicon carbide ring available with TiCH frame.
- Shock ring is eliminated for lighter weight and better heat dissipation.
- Size 04L has a lower frame than 04.

SINGLE FOOT FLY ROD GUIDES - MODEL SF

- Specifically designed for increased rod performance.
- Extremely lightweight and flexible, without sacrificing strength.
- 50% fewer guide wraps to interfere with blank action, also reduces overall weight.
- Closed loop design reduces friction for longer casts.
- Stainless steel construction with industrial hard chrome plating.
- Available in Super Hard Chrome, Black Chrome, TiGOLD™, Illusion, TiBlue™, Bombay Gold, English Bronze, or our TiCH coating.
- Due to the delicacy of guide feet, CSFG and NSFG guides are offered unground.

LITE WIRE FLY TOPS - MODEL FT LITE WIRE and MODEL FTL LITE WIRE

- Lite wire stainless steel construction with industrial hard chrome plating.
- Available in Super Hard Chrome or our TiCH coating.
- Ideal for use on bamboo fly rods, lite weight fly rods, or anywhere physical weights and flexibility are an issue.
- Loop sizes available in both the 5.3mm and 7.8mm I.D.

PACIFIC BAY SALTWATER GUIDES & TOPS

Pacific Bay International has applied the strength and durability of diamond polished HIALOY rollers to its roller guides and tops. HIALOY is Pacific Bay's trade name for the hardest most durable Aluminum Oxide formulation used in fishing guide construction today (in ceramic ring and roller guide construction, other component manufacturers often use softer, less durable, and more line abrasive AO formulations.) Although virtually maintenance free due to the non-corroding elements used, a simple fresh water rinse is recommended to remove salt deposits. As well an occasional drop of heavy reel oil will help to insure a lifetime of performance.

- Hialoy rollers will never wear or corrode under any fishing situation.
- Teflon coated stainless steel bearings in conjunction with the non-corroding hialoy rollers create a double rolling action which virtually eliminates roller freeze-up.
- "Deep-V" roller design will accept all dacron and wire lines, as well as providing adequate knot clearance for mono up to 80 lb test.
- Rolled frame openings prevent line from traveling between frame and roller as well as protects the line from frame edges.
- Frame available in bright and black chrome.

PACIFIC BAY BOAT ROD GUIDES & TOPS

These extremely groove resistant carbide alloy rings, combined with their resistance to the corrosive effects of saltwater, make our CSBG & CSBBG guides and CSBT tops an ideal choice for offshore boat rods. They are also the guides and tops of choice to withstand the continual back and forth abrasion found in downrigger and wire line trolling situations.

PAC BAY BOAT ROD TOPS - MODEL CSBT

- For offshore and wire line trolling rods.
- PAC BAY tungsten carbide alloy ring.
- All welds are silver solder reinforced.

PACIFIC BAY SALTWATER GUIDES & TOPS

THE ELIMINATOR SERIES

HEAVY DUTY ROLLER GUIDES AND TOPS - MODELS ERG & ERT

- Lightweight, one piece frame machined from marine grade aluminum.
- Ideal for use on 80+lb. saltwater rods.
- Teflon bearings reduce friction allowing ultra smooth rolling of rollers.
- Recessed roller design prevents line binding between roller and frame.
- Aluminum side plates offer increased construction durability.

STUART - ROLLER GUIDES (Pat.)

- A super smooth deep-V roller keeps the line in the center where it belongs.
- Large deep-V rollers spin freely on permanently lubricated Kevlar® press fit sleeve bearings.
- Reusable locking patch affixed to screw threads will withstand any heavy vibration to keep rollers secure
- Roller shafts, guide spacer bars, and line rollers are marine-grade polished stainless steel.
- The guide frames are constructed from one piece marine grade aluminum.
- Available in silver, black, and gold, anodized to military specifications.

STUART - ROLLER TOPS (Not pictured)

- A full recessed roller prevents the line from becoming trapped between the roller and the sideplates.
- Large deep-V rollers spin freely on permanently lubricated Kevlar® press fit sleeve bearings.
- As with the guides, the roller tops offer abundant knot clearance.
- All the screw assemblies, disassemble easily to perform routine maintenance.
- Guide spacer bars, roller shafts, and line rollers are marine-grade polished stainless steel.
- Available in silver, black, and gold anodizing to match the “Stuart Roller Guides.”

BOAT ROD GUIDES - MODEL B

- For conventional style boat rods.
- Heavy duty stamped braced frame for added strength.
- Higher frame design reduces line slaps.
- Shock ring is eliminated for lighter weight and better heat dissipation.
- Available with Silicon Carbide, Hialoy, and Titanium Oxide ring.
- Frame available in bright chrome and black chrome.
- Use with model "B" or model "RB" tops.

PACIFIC BAY AERO GUIDES & TOPS

AERO TOPS - MODEL DP

DEEP PRESSED RING TOPS

- Stainless steel frames using our new Pac Bay design.
- The combination of their deep pressed ring design and finish using a PVD process allows these tops to hold up to the most rigorous of fishing conditions.
- Ideal for all saltwater fishing applications.
- Use with Model DP and DPL guides.

AERO GUIDES & TOPS

AERO SERIES - MODEL DPL

LITE FRAME DEEP PRESSED RING GUIDES

- Ideal for use as stripper guides on fly, spinning, and casting rods.
- Low profile, one piece stamped frame.
- Frame design reduces the chance of line snags.
- Deep pressed ring design holds up to the most rigorous of fishing conditions.

AERO SERIES - MODEL DP

DEEP PRESSED RING GUIDES

- Constructed of stainless steel, this new Pac Bay exclusive patented frame design grips your guide rings like no others.
- The combination of their deep pressed ring design and finish using a PVD process allows these guides to hold up to the most rigorous of fishing conditions.
- Ideal for light to medium-heavy saltwater fishing applications.
- use with Model DP tip tops.

Understanding Ring Inserts

GOLD CERMET is just what the doctor ordered to spice up your custom rod. Unlike competitors that just plate their rings in gold, this solid gold ceramic ring features the durability of metal combined with the hardness of a ceramic. The combination of these two materials produces one very beautiful ring. Diamond polished at Fuji's state of the art facilities, these guides boast the smoothest finish available in the fishing world. Fuji was also able to make Gold Cermet one of the lightest ring materials available, while maintaining a strength that beats that of competitors gold rings. Put this all together with Fuji's exclusive Solid Titanium Frames and you get one of the strongest, most functional, and elegant guides ever made. When you want to fish in style, choose Gold Cermet!

SILICON CARBIDE or SiC is one of the most advanced ceramics available today. It's the hardest and most durable in Fuji's lineup and because of this, SiC Guides are particularly well suited for braided line. They also utilize Fuji's Diamond Polishing and boast one of the smoothest rings around. SiC rings were also the first ever to be mounted directly to the frame, thus reducing weight, increasing heat dissipation and amplifying line sensitivity. They'll take whatever you throw through'em!

SILICON NITRIDE II - is an improved version of the original ring, making it a perfect ceramic guide for heavy duty rods. It was designed for use as ball bearings in jet engines, because of its tremendous hardness factor and high wear resistance. If it can handle the heat and friction of a jet engine, just imagine how well it will perform under the toughest fishing conditions. And if there ever was a ring built for wire line, this is it. Silicon Nitride has the strength and durability needed to tackle any kind of saltwater fishing.

ALCONITE[®] - Fuji's engineers thought long and hard on how to make a guide lighter and stronger yet keep the cost down. After years of research they came up with Alconite, a special type of ceramic that offers strength, lightness, and durability. In fact Alconite offers 80% greater compression strength and is 20% lighter than Aluminum Oxide. Also, through Fuji's Diamond Polishing, Alconite boasts a finish that is smoother than that of Hardloy[®]. Fuji engineers were also able to make Alconite the thinnest and lightest ceramic ring available today; even 7% lighter than standard SiC Rings! When combined with the lightweight Concept frame the results are unparalleled ... 35% lighter and up to 50% stronger than ordinary guides.

HARDLOY has offered anglers a reliable, cost effective and high performance solution for many years. Hardloy is made of a special blend of high grade Aluminum Oxide. This blend produces a much higher compression strength and makes Hardloy much more durable, lighter weight and greater heat dissipation. All of these factors combine to make Hardloy an excellent choice for the avid angler.

ALUMINUM OXIDE RING - The innovative idea of using ceramics as a fishing guide started some 40 years ago with the introduction of Aluminum Oxide, also known as the Hard Ring guide. With this new material, Fuji started a revolution in guide development that has been a mainstay for rod builders and fisherman over all these years. All Aluminum Oxide rings are diamond polished to an ultra-smooth finish and come in a variety of frame styles and finishes.

Understanding Frames

“N” FRAME GUIDES - After introducing the Aluminum Oxide ceramic guide to the fisherman, Fuji became the first to produce a stamped, one-piece frame design in 1976. The “N” frame had no welds or snap together frames, making it stronger, lighter in weight and improved corrosion resistance over any other guide at the time. After over 30 years it remains one of the best frames ever designed and continues to be used in most every style of fishing.

“V” FRAME GUIDES - Fuji’s improved spinning rod guide was designed with a “V” frame design to improve the strength of the guide over the original frame design. Fuji was the first to seat the guide ring directly to the frame and the “V” frame became the first spinning guide with this new feature. By eliminating the shock ring not only was the weight of the guide lightened, but also sensitivity was improved, enhancing overall rod performance.

“Y” FRAME GUIDES - The “Y” frame or “Power Angle” is one of the strongest spinning guides made in its class. It sits higher on the blank, than the standard spinning guide and for good reason. By sitting higher, line slap is reduced allowing for greater casting distance with the same amount of effort. With it’s unique frame construction this guide is up to 30% stronger, yet considerably lighter than your standard spinning guide. It is available in all types of ceramic rings, as well as finishes, from size 7 to 30.

LC SERIES CONCEPT GUIDE™ - This guide was developed with the use of a high-speed camera, which has a frame speed of an unbelievable 20,000 frames per second. What Fuji found was a tremendous amount of twists and loops occurring around guides, that to the unaided eye, seemed as though the line moved through the guides without any interference. This brought forth the “LC” Concept Guide frame. With its low, sloping, and lightweight frame design, line entanglement is greatly reduced, enhancing casting distance and accuracy, as well as reducing the total weight of the rod. Designed with a deep pressed frame that helps to secure and protect the ring, the “LC” style guide is among the most innovative in Fuji’s line of guides and is a great addition to the Concept Guide series.

MN SERIES - When Fuji designed the MN series they developed a special way of twisting and bending the frame to increase the total strength of the guide by more than 10%. This makes the guide ideal for Medium to Heavy duty casting and spinning rods. Another advantage of the MN Series is that the unique frame design makes it virtually impossible for line to tangle, even on braided lines! By seating the Silicon Carbide ring in a “Deep Press” design Fuji’s engineers made it so that even knots or swivels can’t damage it. The MN Series continues Fuji’s commitment of providing guides that hold up to the rigors of everyday fishing.

POWER OVAL CONCEPT GUIDES™ - Designed to handle even the toughest situation. Fuji created these boat rods to take the abuse of braided lines, yet prevent the frustration of tangling. Using their unique frame design and oval rings these guides smooth out the line as it passes through, this creates less friction and prevents tangles altogether.

HB HEAVY CONCEPT GUIDES™ - The HB Series is a New Heavy Duty Boat Rod Guide for 30 to 50 lb class rods. This particular series has a new arc-shaped, Stainless-Steel frame which increases the overall guide’s strength, hardness and corrosion resistance. A sloped, shorter length frame adds to rod flexibility and less line tangling. Fuji’s new embossed feature helps keep the foot from sliding out from under the thread. By increasing structural and material strengths, the HB Series gives the angler a guide that is much lighter than the LR series. Once again, these features add to the overall performance of the rod. The HB Series is available in sizes up to 25 and comes in Silicone Carbide and Silicone Nitride II rings for use in all fishing applications and conditions.

“LR” FRAME GUIDES - Designed to meet the needs of saltwater or big lake fisherman, LR style guides offer great strength and durability and it will flex as the rod does, providing for improved rod control. Again designed with a one-piece frame to do away with welds that can weaken the frame, the “LR” frame meets all the needs of the big rod fisherman with ring sizes from an 8 up to a size 25.

Fuji SiC GUIDE

SUPER LIGHT SUPER HEAD SUPER SMOOTH & GREAT HEAT RESISTING 100% SILICON CARBIDE RING

We can get any item Fuji makes.

Silicon Carbide Ring - Concept Guides & Tops

for Spinning, Casting & Fly Rods

One of the most advanced ceramics, the Silicon Carbide ring is used in the construction of high quality rods around the world. Diamond polished SiC rings were the first to be mounted directly to the frame, which reduces weight, increases heat dissipation, and amplifies line sensitivity. Besides the Gunsmoke and Gold stainless steel frame finishes, SiC rings are also available with Titanium Alloy frames offering a very light, super strong frame that is totally corrosion resistant under the most extreme conditions.

TITANIUM ALLOY FRAME

Silicon Carbide Concept Guides with Titanium Metal frames are 45% - 65% lighter, over 3 times stronger than guides with stainless steel frames, and will remain totally corrosion-free in saltwater use. Titanium is the ultimate frame material and only Fuji has it. Just think of it, a guide you will never have to worry about. Guaranteed!

Silicon Carbide Ring - Concept Guides & Tops

for Spinning, Casting & Fly Rods

One of the most advanced ceramics, the Silicon Carbide ring is used in the construction of high quality rods around the world. Diamond polished SiC rings were the first to be mounted directly to the frame, which reduces weight, increases heat dissipation, and amplifies line sensitivity. Besides the Gunsmoke and Gold stainless steel frame finishes, SiC rings are also available with Titanium Alloy frames offering a very light, super strong frame that is totally corrosion resistant under the most extreme conditions.

GUNSMOKE FINISH - S4 STAINLESS STEEL FRAME

These guides were the first designed "Concept Guides", when they were introduced several years ago. Each is produced with a lightweight, but corrosion resistant, S-4 Stainless Steel and a tough Gunsmoke plated finish. Today many rod builders have found out themselves the performance advantages of using SiC Concept Guides on their rods. Concept Guides enhance rod performance like no other guide can.

CHROME FINISH - S4 STAINLESS STEEL FRAME

The fly enthusiast can now choose from a variety of guide finishes including Chrome. Again through the efforts of Fuji's engineers, they have managed to make a fly guide with a Silicon Carbide ring that is as light as any snake guide. With one of the smoothest ceramic ties ever made, Silicon Carbide offers unbelievable casting performance over a traditional snake guide. Also, since Fuji's fly guides have a single foot, weight is reduced and rod action enhanced. Tradition will fly out the window once you've tried Fuji's new single foot fly guides. There is no comparison.

Silicon Carbide Ring - Concept Guides & Tops

for Spinning, Casting & Boat Rods

One of the most advanced ceramics, the Silicon Carbide ring is used in the construction of high quality rods around the world. Diamond polished SiC ring were the first to be mounted directly to the frame, which reduces weight, increases heat dissipation, and amplifies line sensitivity. Besides the Gunsmoke and Gold stainless steel frame finishes, SiC rings are also available with Titanium Alloy frames offering a very light, super strong frame that is totally corrosion resistant under the most extreme conditions.

MNS and ICMNS Series

The "MN Series" for Medium to Heavy Duty casting and spinning rods, is designed to take the punishment, yet be much lighter than the guides and tops it replaces. In designing these guides, Fuji improved the strength by 10% while reducing the weight of the guides by more than 10%.

The unique frame design makes it virtually impossible for line to tangle; even braided lines, which are notorious for their line tangling ability, won't get hung up on these guides. The frames "Deep Press" design, seats the ring so well, that even knots or swivels can't damage it. The "MN Series" continues the commitment made by Fuji to provide guides that not only hold up to the rigors of everyday fishing, but also provide improved performance for the fisherman.

Available in both "TiC" and Gunsmoke finishes, TiC is a Titanium plated finish that is particularly resistant to the effects of saltwater. Please note this is a plating not a true Titanium metal frame. Fuji's Titanium metal frames still provide the best results in saltwater, since these frames remain corrosion free in saltwater.

Fuji Introduced HB Series Concept Guide — The HB Series is a Heavy Duty Boat Rod Guide for 20 to 30lb. class rods. This particular series has a new Arc-Shaped, Stainless-Steel frame which increases the overall guide's strength, hardness and corrosion resistance. A sloped, shorter length frame adds to rod flexibility and less line tangling. Fuji's new embossed feature helps keep the foot from sliding out from under the thread. By increasing structural and material strengths, the HB Series gives the angler a guide that is much lighter than the HN series. Once again, these features add to overall performance of the rod. The HB Series is available in sizes up to a 25 and comes in Silicon Carbide and Silicone Nitride II rings for use in all fishing applications and conditions.

Concept Tops - without wrap on flange

for Medium to Heavy Duty Rods using braided lines

Braided lines are a great fishing advantage... but sometimes they can be a really big disadvantage because of line tangling, especially at the tip of the rod. Fuji's new Concept Tops™ are virtually tangle-free allowing braided lines to slide off the frame with very little resistance. Combined with a deep press frame, lighter ceramic rings, and a low profile design, the new HG and MG concept Tops™ can handle anything you throw through them...yet are up to 45% lighter than ordinary tip tops.

Gold Cermet Ring - Concept Guides & Tops

Titanium Guides & Tops for Spinning, Casting, & Fly Rods

Gold Cermet is just what the doctor ordered to spice up your custom rod. Unlike competitors that just plate their rings in gold, this solid gold ceramic ring features the durability of metal combined with the hardness of a ceramic. The combination of these two materials produces one very beautiful ring. Diamond polished at Fuji's state-of-the-art facilities, these guides boast the smoothest finish available in the fishing world. Fuji was also able to make Gold Cermet one of the lightest ring materials available, while maintaining a strength that beats that of competitors gold rings. Put this all together with Fuji's exclusive Solid Titanium Frames and you get one of the strongest, most functional, and elegant guides ever made. When you want to fish in style, choose Gold Cermet!

for Wire Line & Boat Rods

A new and improved version of the original ring; Silicon Nitride II has greater strength and durability making it the perfect guide for saltwater or heavy-duty rods. This guide is more than 30% lighter than your standard heavy-duty guide, yet is designed to take all the punishment that a tough day of fishing demands. One of the greatest assets of this ring is its wearability. Besides having high strength and hardness, Silicon Nitride II has the strongest wear resistance factor of any ceramic made, making it a great choice for wire line rods.

BLACK FINISH - S4 STAINLESS STEEL FRAME			WIRE LINE AND BOAT TOPS																																																								
Main quality characteristics of Silicon Nitride II rings: <ul style="list-style-type: none"> • High strength • High hardness • Outstanding wear resistance The frames are produced from S4 stainless steel and include a special exterior finish designed to fight the effects of saltwater corrosion. This two-step approach enhances the longevity of the guide in what is without a doubt the toughest fishing conditions found anywhere. The cost of this new guide is over 60% less as compared to your typical wire line guide. It's lightweight, it's rugged, and it's reasonably priced.			<table border="1"> <thead> <tr> <th>No.</th> <th>Ring Size</th> <th>Tube ID 64th's</th> <th>Price</th> <td rowspan="12"> <p>BHNNT</p> </td> </tr> </thead> <tbody> <tr> <td>BHNNT10-7.5</td> <td>10</td> <td>7.5</td> <td>\$6.02</td> </tr> <tr> <td>BHNNT10-8</td> <td>10</td> <td>8</td> <td>6.02</td> </tr> <tr> <td>BHNNT10-9</td> <td>10</td> <td>9</td> <td>6.02</td> </tr> <tr> <td>BHNNT10-10</td> <td>10</td> <td>10</td> <td>6.02</td> </tr> <tr> <td>BHNNT10-11</td> <td>10</td> <td>11</td> <td>6.02</td> </tr> <tr> <td>BHNNT10-12</td> <td>10</td> <td>12</td> <td>6.02</td> </tr> <tr> <td>BHNNT12-10</td> <td>12</td> <td>10</td> <td>6.43</td> </tr> <tr> <td>BHNNT12-11</td> <td>12</td> <td>11</td> <td>6.43</td> </tr> <tr> <td>BHNNT12-12</td> <td>12</td> <td>12</td> <td>6.43</td> </tr> <tr> <td>BHNNT12-14</td> <td>12</td> <td>14</td> <td>6.43</td> </tr> <tr> <td>BHNNT12-15</td> <td>12</td> <td>15</td> <td>6.43</td> </tr> <tr> <td>BHNNT12-18</td> <td>12</td> <td>16</td> <td>6.43</td> </tr> </tbody> </table>				No.	Ring Size	Tube ID 64th's	Price	<p>BHNNT</p>	BHNNT10-7.5	10	7.5	\$6.02	BHNNT10-8	10	8	6.02	BHNNT10-9	10	9	6.02	BHNNT10-10	10	10	6.02	BHNNT10-11	10	11	6.02	BHNNT10-12	10	12	6.02	BHNNT12-10	12	10	6.43	BHNNT12-11	12	11	6.43	BHNNT12-12	12	12	6.43	BHNNT12-14	12	14	6.43	BHNNT12-15	12	15	6.43	BHNNT12-18	12	16	6.43

Alconite Ring - Concept Guides & Tops

for Casting, Spinning, & Coarse Rods

A very strong and durable material, Alconite is the latest in a long line of ceramic rings developed by Fuji. Alconite is so durable it can be made thinner than any other ring, so strong it will hold up to all kinds of fishing demands. Alconite has an 80% greater compression strength and is 20% lighter than aluminum oxide, making it one of the toughest rings used for fishing, as well as one of the lightest. Combined with Concept guide frames, Alconite ring guides & Tops continue Fuji's tradition of producing components that enhance a rod's performance.

Ever since we introduced Fuji's Alconite Ring Concept Guides, rod builders and fishermen alike have been amazed at the performance characteristics of this guide. Alconite offers the strength, lightness, and durability not found in other rings. 80% greater compression strength and 20% lighter than aluminum oxide have made it the ring of choice by rod builders. When combined with the lightweight Concept Guide frame the results are unparalleled...35% lighter than ordinary guides and up to 50% lighter than ordinary tops. Alconite is one more reason why Fuji remains the undisputed leader in rod components.

Gold Cermet Ring - Guides & Tops

for Spinning, Casting & Fly Rods

This dynamic material provides a non-corrosive, solid gold ceramic ring that features the hardness of ceramic and the durability of metal. This combination produces a strength that rivals other guides, while remaining lighter and thinner than any other ring material. Add Fuji's diamond polishing and the Gold Cermet ring boasts a finish that's smoother than the SiC ring

Silicon Carbide Ring - Guides & Tops

for Spinning, Casting & Fly Rods

One of the most advanced ceramics, the Silicon Carbide ring is used in the construction of high quality rods around the world. Diamond polished SiC rings were the first to be mounted directly to the frame, which reduces weight, increases heat dissipation, and amplifies line sensitivity. Besides the Gunsmoke and Gold stainless steel frame finishes, SiC rings are also available with Titanium Alloy frames offering a very light, super strong frame that is totally corrosion resistant under the most extreme conditions.

Silicon Carbide Guides with Titanium Metal frames are 45% - 65% lighter, over 3 times stronger than guides with stainless steel frames, and will remain totally corrosion-free in saltwater use. Titanium is the ultimate frame material and only Fuji has it. Just think of it, a guide you will never have to worry about again. Guaranteed!

Silicon Carbide Ring - Guides & Tops

for Spinning, Casting & Fly Rods

One of the most advanced ceramics, the Silicon Carbide ring is used in the construction of high quality rods around the world. Diamond polished SiC rings were the first to be mounted directly to the frame, which reduces weight, increases heat dissipation, and amplifies line sensitivity. Besides the Gunsmoke and Gold stainless steel frame finishes, SiC rings are also available with Titanium Alloy frames offering a very light, super strong frame that is totally corrosion resistant under the most extreme conditions.

FUJI CARDED SETS

This is just an example of Fuji carded sets. It is impossible to show all carded sets because virtually anything can be carded to your request.

Call for details.

Hardloy Ring - Guides

for Spinning & Casting Rods

Fuji's most popular guide and top, Hardloy is produced from a special blend of high grade Aluminum Oxide. Because the Hardloy ring is diamond polished and permanently mounted to the frame, it results in lighter weight, greater heat dissipation and decreased line wear. The final analysis—increased performance. Available in a variety of frame styles and finishes. All frames are finished over stainless steel.

CASTING GUIDES

Sizes 10, 12, 16 & 20 can also be used as stripper guides on a fly rod.

Aluminum Oxide Ring - Guides

for Spinning, Casting, Fly, & Boat Rods

The innovation in ceramics started more than 30 years ago with the Aluminum Oxide ring guide. Known for many years as the “Hard” guide, it ushered in a new generation of guides and tops. Still widely used by many rod builders and fishermen, these rings are assembled with a polymer shock ring and are available in black and stainless steel finishes. Now an updated version of the Aluminum Oxide ring is available. The most significant difference between the “Hard” ring and this guide is the absence of a polymer shock ring because of its durable nature, in addition to it being lighter and thinner. All Aluminum Oxide rings are diamond polished to an ultra-smooth finish and come in a variety of frame styles and finishes. All frames are finished over stainless steel.

Hopkins & Holloway - Snake Guides & Tops

for Fly Rods

Hopkins & Holloway snake guides are made from hard drawn diamond polished wire then plated with a chrome finish. Hopkins & Holloway guides are more than 22% harder and have nearly twice the plating thickness of the leading competitor. This means longer lasting and higher performance components. Superior quality and durability are why Hopkins & Holloway have been the name in snake guides and tops for the past 50 years.
